

A PREVENTION-FIRST CYBERSECURITY PLATFORM

Unified Prevention Across Enterprise IT and Cloud

Preventing cyberattacks through proactive security

WHY SECURITY STALLS SANER PLATFORM

Security programs slow down when coordination breaks down, priorities compete, and accountability gets fuzzy across teams. Here are seven main reasons why your security is failing:

Remediation backlogs grow

Fixes pile up faster than teams can triage, schedule, and close them.

DevOps moves fast

Release velocity outruns governance, creating drift, misconfigurations, and recurring findings.

Security blames Operations

Security flags issues, but hands off execution, then escalates when progress lags.

Platform teams sit in the middle

Platform becomes the broker between security asks and engineering reality, without clear authority.

Operations push back on risk

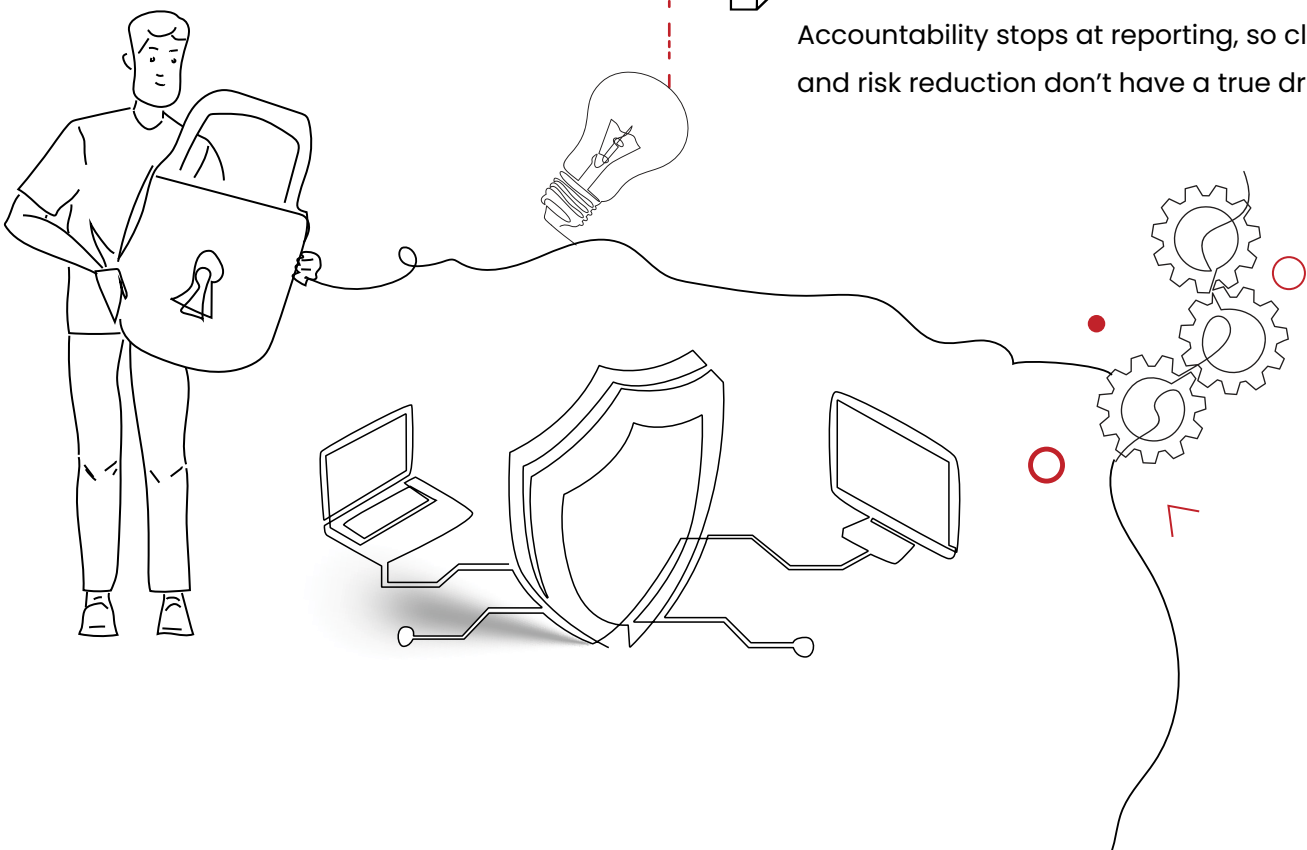

Ops prioritizes uptime and stability, and challenges risk ratings that disrupt delivery.

Everyone has dashboards

Data is visible, but fragmented across tools, owners, and inconsistent metrics.

No one owns the outcome

Accountability stops at reporting, so closure and risk reduction don't have a true driver.

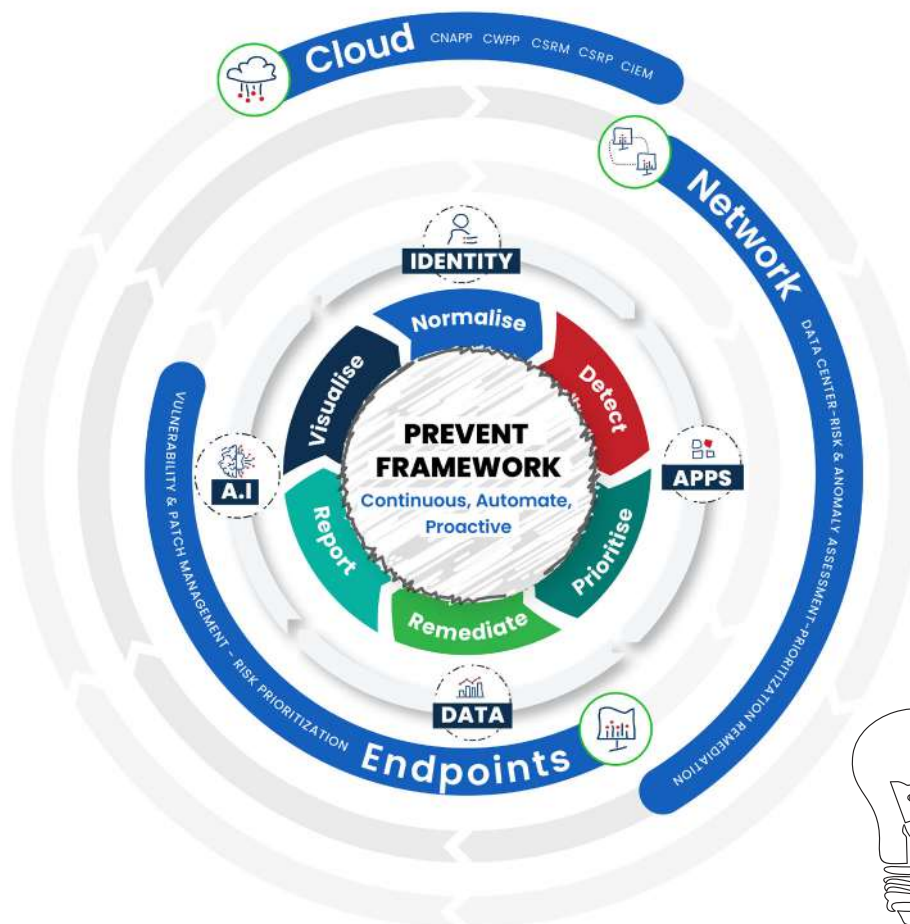

SANER PLATFORM

Powered by Prevent Framework

Prevention isn't just about addressing vulnerabilities; it's about rethinking how we approach cybersecurity at its core. At SecPod, we focus on removing the root causes of attacks rather than reacting to symptoms.

PREVENT UNIFIES

DETECTION	PRIORITIZATION
ASSESSMENT	REMIEDIATION
AUTOMATION	GOVERNANCE

Cloud Security CNAPP
Vulnerability & Exposure Management
Risk-based Remediation

SANER PLATFORM IN ONE VIEW

Saner is the unified cyberattack prevention platform built to execute PREVENT across the IT landscape.

Three solution categories, one Prevention engine

Vulnerability Exposure Management

Saner CVEM is a Continuous Vulnerability and Exposure Management (CVEM) solution for continuous visibility, assessment, and remediation of vulnerabilities across devices and network infrastructure.

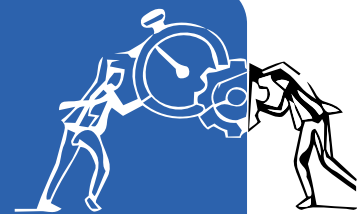

Remediation

A Continuous Risk Remediation solution that minimizes the attack surface by eliminating potential risks across the IT and cloud infrastructure.

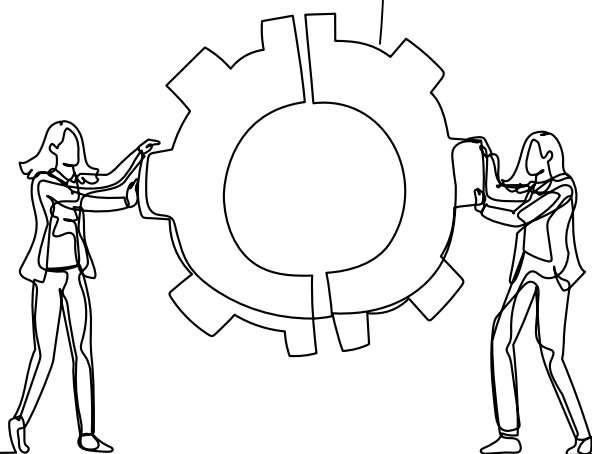

Cloud Security - CNAPP

Saner Cloud is an AI-fortified CNAPP that delivers continuous visibility, security compliance, and risk mitigation for cloud environments.

HOW IT WORKS END TO END

- ⇒ Discover vulnerabilities, misconfigurations, exposures, and drift across your environment
- ⇒ Contextualize findings with asset criticality, ownership, and business impact
- ⇒ Prioritize what matters using exploitability signals and real-world intelligence
- ⇒ Orchestrate remediation with automated workflows across Security, Ops, and DevOps
- ⇒ Validate closure with verification, and keep monitoring to prevent reintroduction
- ⇒ Monitor posture drift continuously

About SecPod

SecPod is a leading cyber security technology company committed to preventing cyberattacks through proactive security. Its mission is to secure computing infrastructure by enabling preventive security posture.

At the core of SecPod's offerings is the Saner Platform - a suite of solutions that help organizations establish a strong security posture to preempt cyber threats against endpoints, servers, network and cloud infrastructure, as well as cloud workloads. With its cutting-edge and comprehensive solutions, SecPod empowers organizations to stay ahead of evolving threats and build a resilient security framework.
